

Mt. Azuma

Mt. Azuma is an active volcano that may suddenly erupt at any time.

The volcanic alert level system is divided into 5 levels depending on the scope of danger zones and protective actions required when a volcano erupts. This map illustrates areas that require vigilance, restricted positions, and evacuation routes in levels 2 and 3 of the volcano alert level system.

<Target area>

Level 2 (Do not approach the crater): Approx. 1.5 km from the crater
 Level 3 (Do not approach the volcano): Approx. 4 km from the crater

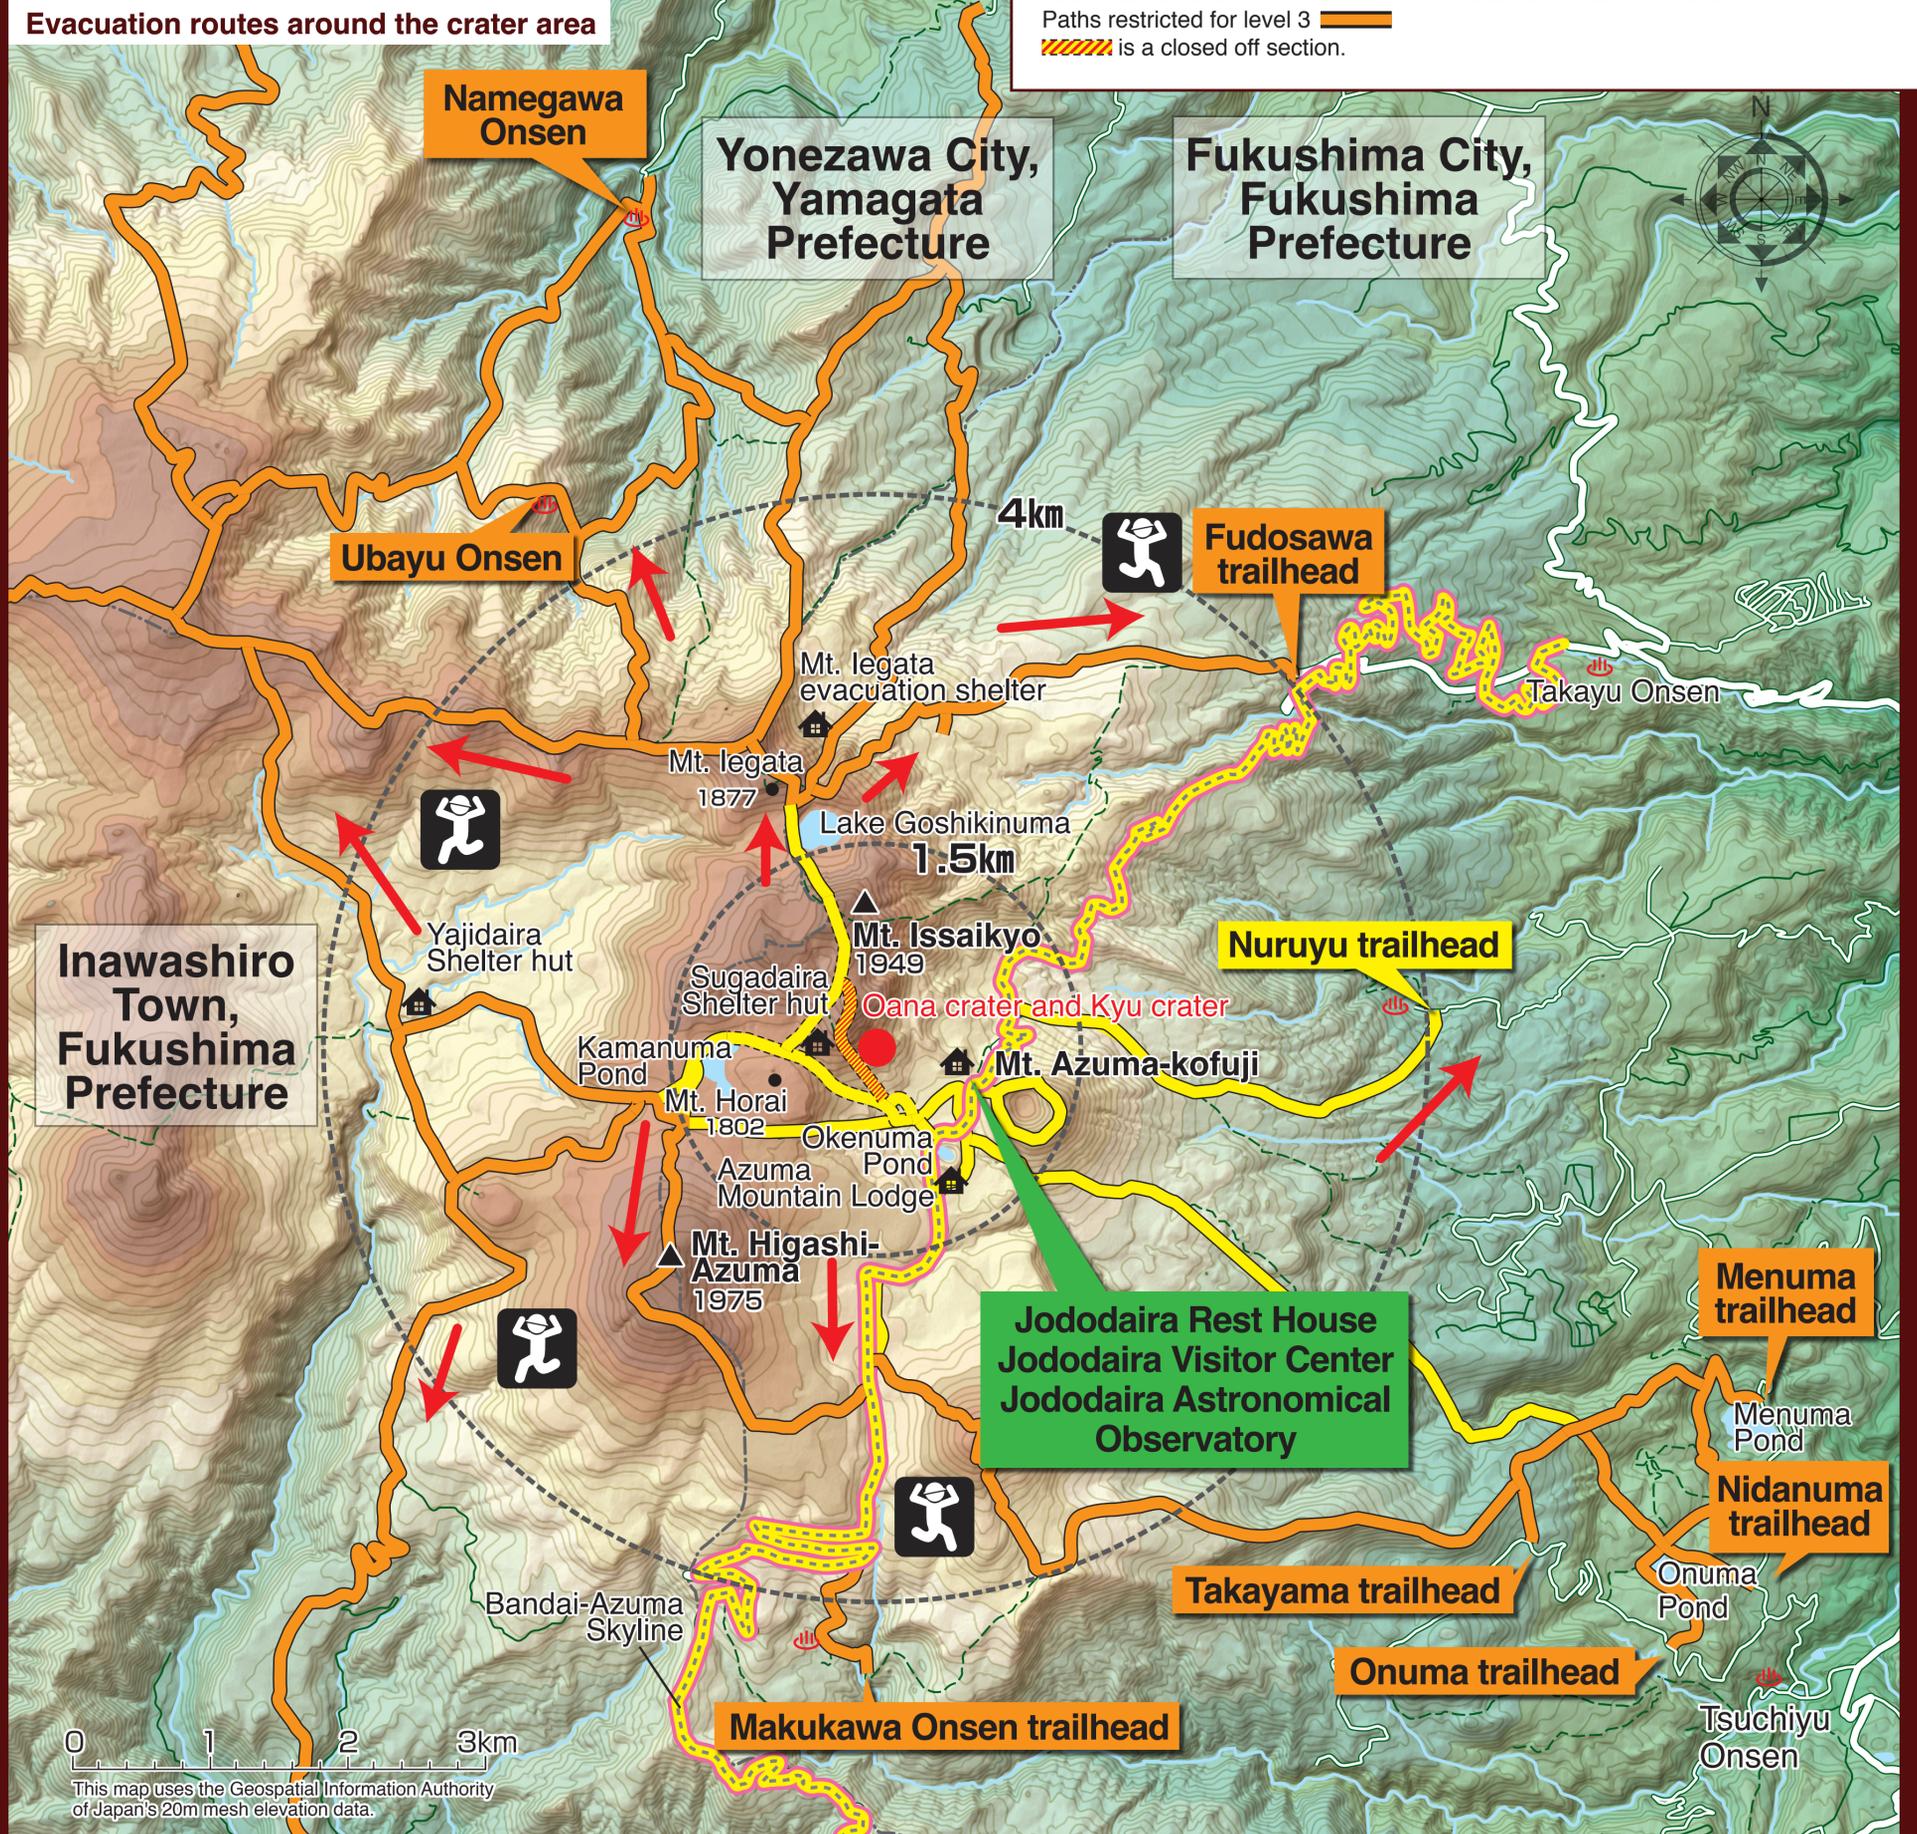

<Hiking trail>

Paths restricted for level 2 
 Paths restricted for level 3 
 is a closed off section.

<Bandai-Azuma Skyline>

Road restricted for level 2 

Evacuation routes around the crater area

This map uses the Geospatial Information Authority of Japan's 20m mesh elevation data.

This map was created with the approval of the Dean of the Geospatial Information Authority of Japan using numerical value map 25000 (map image) issued by said Authority. (Approved information from 2018 used, No. 1226)

Preparation before hiking

Step 1 Check hiking information before entering the trailhead.

See Japan Meteorological Agency homepage
<https://www.data.jma.go.jp/multi/index.html?lang=en>

Step 2 Check your mountain hiking equipment and carry-along items.

Towel, mask, headlamp, flashlight, large backpack, helmet, mobile phone, portable radio, emergency food, drinking water

Step 3 Submit your hiking notification (hike plan).

Where to submit: Fukushima Prefectural Police Headquarters trailhead box
 [Click here for the hiking notification form]
 Fukushima Prefectural Police Headquarters homepage
http://www.police.pref.fukushima.jp/07.anzen/sangaku/sounan/sangaku_todoke.html

What to be mindful of while hiking

- *Be mindful of the area around the crater.
- *Be aware of the location of the crater and wind direction.
- *Pay attention to information coming in on your mobile phone and portable radio while hiking.
- *Do not get close to fumaroles or depressions or valleys where volcanic gases can easily accumulate.
- *If you discover any abnormal phenomena (such as fumes, odors, fissures, earthquakes, etc.), hiking down to a safe elevation and alert the local municipalities, police and meteorological observatory.

If there is an eruption while hiking

- *Confirm where the eruption has occurred and immediately evacuate in a direction away from the crater.
- *Use your backpack and helmet to protect yourself from volcanic projectiles and ash and take temporary shelter in a mountain hut or behind rocks.
- *Cover your mouth and nose with a mask or wet towel to prevent inhaling volcanic ash or gas.
